

**Pro forma for Cases to be submitted for Cancer Whole-Genome Sequencing (WGS)
To be used for Adult Cancer patients (excluding CNS tumours)**

Genomic testing is commissioned by NHS England with the patients eligible to access a test specified in the national genomic test directory ([NHS England » National genomic test directory](#)).

For all other adult solid tumours, WGS is only available where there is a clear, clinical question and where results have expected utility/impact.

This form needs to be completed for adult cancer patients from the age of 25 (excluding CNS Tumours) in addition to the information provided via the ROD and TOF. Please note that incomplete or lacking forms will delay the submission of these cases and that the lab will not actively chase missing information.

Paediatric and TYA patients (<25 years old), as well as CNS Tumours, can be referred without the completion of this pro forma.

Please contact gos-tr.pmu@nhs.net with queries on how to submit/organisational queries. Please get in touch with dortewren@nhs.net to discuss eligibility in further detail for specific cases.

Please complete the below alongside the TOF and ROD for the patient:

Patient Name:	
Date of birth:	
NHS number:	

1. Disease entity/Pathway (i.e. AML, ALL, ESOC):

2. G-banding/karyotype:

3. DNA NGS:

4. RNA Fusion NGS:

5. Specific question/Issue to be address by WGS:
